

João Silva

Backend Engineer

joao.silva@exampleemail.com · +351 912 345 678 · Lisbon, Portugal

PROFESSIONAL SUMMARY

Senior backend engineer with 9 years of experience architecting high-throughput distributed systems. Expert in Go and Node.js, focused on cloud-native solutions, event-driven design, and system scalability.

SKILLS

Go

Node.js

TypeScript

PostgreSQL

Apache Kafka

gRPC

Docker

AWS

Kubernetes

Terraform

Redis

EXPERIENCE

Senior Backend Engineer

Mar 2021 – Present

Tagus Tech

- Redesigned the core payment ingestion flow using Go and Kafka, successfully handling peaks of 15,000 requests per second.
- Led a backend engineering pod of 4 developers, mentoring junior staff and establishing strict design patterns.
- Architected cloud infrastructure with Terraform on AWS, migrating key services to Kubernetes to improve scaling capabilities.

Backend Engineer

Jan 2018 – Feb 2021

Lisbon Digital Labs

- Built secure microservices with Node.js and TypeScript to support high-traffic mobile application clients.
- Migrated legacy monolith database instances to dynamic RDS clusters, reducing downtime to near zero.

Software Developer

Sep 2015 – Dec 2017

WebFast Portugal

- Developed and optimized REST APIs for a prominent real estate portal.
- Configured continuous integration pipelines with Jenkins, cutting deploy time in half.

EDUCATION

MSc in Computer Science and Engineering

Sep 2010 – Jun 2015

University of Lisbon
